

Providing Tomorrow's Solutions Today.™

HEALTHCARE OVERVIEW

A Powerful Prescription for Savings, Efficiency—and Absolute Confidence

Amid a complex array of medicines, compounds and delivery systems, complying with government regulations and guidelines for disposal of pharmaceutical waste has become a costly challenge. PSC offers exactly what you're looking for: simple, reliable waste management programs specifically designed for your facilities, your workflow and your budget.

The PSC Approach

PSC will work with you to design a program that is right for you. From simple transportation and disposal to full on-site program management, we can provide as little or as much assistance as you need.

Formulary Review: PSC starts by analyzing your formulary to identify RCRA, state regulated, DEA controlled and DOT regulated materials. We then develop a comprehensive road map for disposal.

Collection and Containerization: Getting waste material from the point of care to the proper place of disposal with maximum efficiency and discretion involves strategy, documentation and training. After optimizing your workflow, PSC collects the waste from these accumulation points using a solution specifically tailored to you.

Segregation and Packaging: After evaluating and segregating materials for handling and packaging (in full compliance with federal guidelines) PSC provides expert, on-site management of materials tagged for destruction.

Why Choose PSC?

- Customized solutions that cut costs and overhead
- Smart, sustainable disposal technologies keep you compliant and provide a greener solution
- Owner-operator model reduces worry and liability
- Single-source strategy saves you phone calls and headaches
- Nationwide, treatment, storage, and disposal facilities (TSDFs) offer speed, convenience and local responsiveness

Transportation and Disposal: Once our technicians collect the waste, you can be sure it will be disposed of in the most efficient, cost-effective way using our nationwide EPA-approved network of treatment, storage, and disposal facilities (TSDFs). Thus, you can rest

assured the job is being done right, and that you're in full compliance with all regulations and applicable guidelines.

Safeguarding the nation's precious water supply, the US EPA is redoubling its efforts to hold the healthcare industry accountable for their pharmaceutical waste. Make sure your

operation complies with the law.

Discover What PSC Can Do for You

In business for more than 25 years, PSC has the experience, personnel, equipment and facilities to bring you a safe, compliant, cost-effective waste management solution. See what a difference we can make for you.

PSC Also Offers These Healthcare Waste Management Services:

- Lab Packing
- Waste Collection
- Universal and E-Waste Disposal
- Transportation Services
- Training and Recordkeeping
- Laboratory Analysis
- Emergency Response
- Neutralization Tank Cleaning
- Departmental Waste Pick-up and Centralization
- Hazardous Chemical and Biologic Management
- Hazardous Waste Program Management
- Sustainability Program Design and Management

Let PSC Help You Manage These Federally Regulated Substances:

Arsenic trioxide P012	Warfarin >0.3% P001	Streptozotocin U206
Formaldehyde U122	Azaserine U015	M-Cresol D024
Epinephrine P042	Chloral Hydrate(CIV) U034	Lindane U129
Hexachlorophene U132	Ethyl Carbamate U238	Lindane D013
Nicotine P075	Chlorambucil U035	Saccharin U202
Mercury U151	3-Methychloroanthrene U157	Mercury D009
Nitroglycerin P081	Cyclophosphamide U058	Selenium Sulfide U205
Paraldehyde U182	Arsenic D004	Selenium D010
Phentermine (CIV) P046	Daunomycin U059	Uracil Mustard U237
Phenol U188	Barium (salts) D005	Silver D011
Physostigmine P204	Melphalan U150	Warfarin<0.3% U248
Reserpine U200	Cadmium D006	Dichlordifl Uormethane U075
Physostigmine Salicylate P188	Mitomycin C U010	Chloroform D022
Resorcinol U201
