

Providing Tomorrow's Solutions Today.™

TANK CLEANING SERVICES

## Innovation and Experience that Speak Volumes

*It's a fact: tanks must be cleaned. Whether regaining capacity lost to sludge accumulation, or preparing for inspection and repair, tank cleaning consumes a large part of your maintenance budget. Using the wrong vendor or wrong technology can be ineffective, costly—even dangerous. And it can expose you to a host of compliance and regulatory issues.*

### **Turn to PSC**

An industry innovator, PSC offers a full range of integrated services, custom-engineered solutions, and unrivaled experience to clean your tanks thoroughly, reduce out-of-service time, manage waste and lower your maintenance costs.

### **A More Professional Approach**

Before we start any project, PSC professionals do a site walk, take test samples, review cribbing plans, discuss your goals and deliver a comprehensive project plan—one providing the smartest, most economical way to clean your tank, whatever the reason.

### **Innovative Procedures. Qualitative Results.**

No two tank cleaning projects are alike. That's why—with our continual investment in technology, range of proprietary processes, and unmatched engineering know-how—PSC always employs the best procedure to get the job done, including:

**RoboJet™:** The most advanced, automated, non-invasive tank cleaning technology operated by the most experienced team in the industry—for safer, more productive work on routine projects.

**2" - up to 400 psi** – the industry standard

**3" - up to 2000 psi** – a new capability designed for larger flows, higher pressures and tougher jobs

**HP 2000™:** For more involved projects marked by advanced levels of sludge we use our high-pressure (2000 psi @ 800 gpm) closed-loop recirculation system, which slurries the sludge back into the liquid phase while the tank is in normal service.

## **Why Choose PSC?**

### **Supreme Safety**

*First and foremost, for performance you can rely on.*

### **Innovative, Integrated Solutions**

*From robotic tank cleaning to ultra-high hydroblasting equipment and project-engineered circulation loops, no one offers the range of solutions we do.*

### **Better Results through Technology**

*Our Rhino Tank Tracker™ ensures best-practice procedures, raises project visibility, and helps you control costs.*

### **Highly Trained Professionals**

*Our experienced technicians, engineers and industry experts know your business, and consistently provide exceptional service.*

**Custom Circulation Loops:** If the situation seems impossible, look to PSC for a custom-engineered solution that will rid your most complex tank projects of deeply impacted sludge and other residues.

### **A New Level of Project Visibility —and Accountability**

PSC's state-of-the-art Rhino Tank Tracker™ sets a new standard, giving you unprecedented visibility into the work being performed. It also helps us better manage your contract, measure material out versus bid, and determine costs **before** you get the bill.

### **Smart Waste Minimization and Disposal Services**

Count on PSC for a range of cost-effective volume-reduction processes, designed to recover high-value products and reduce disposal costs.

### **PSC offers these tank cleaning services—and much more:**

- Dewatering and Sludge Processing
- Hydrocarbon Recovery and Degassing
- Liquid and Semi-Solids Removal
- Odor Control Systems
- Hydroblasting

### **Let PSC Lower Your Costs and Raise Your Confidence**

Innovative cleaning solutions. Unrivaled safety and engineering expertise. Technology that controls costs and sets the bar higher. Don't entrust your tanks to anyone but the industry experts—PSC.
