

Providing Tomorrow's Solutions Today.™

HYDROBLASTING OVERVIEW

Under the Gun— for an Over-the-Top Clean

For heat exchangers and drums, towers and process piping, hydroblasting is one of the most cost-effective cleaning methods available. Done effectively, it delivers a host of benefits from improving process efficiency, to cutting fuel consumption, ultimately lowering your total operating cost.

Discover the PSC Difference

Amid a sea of competitors, PSC has taken hydroblasting to new heights. How? With superior equipment and applications to clean even the hardest-to-reach places. With a highly trained, safety-minded workforce. And with nationwide coverage that gives you the responsive service your business demands.

Enhanced Results through Automation

Along with conventional hydroblast cleaning methods, PSC uses advanced customized, automated hands-free tools that drastically increase cleaning rates and your satisfaction. They also provide a safer, more productive work environment.

Convenient Value-Added Services

While we're on site, consider PSC for other services to benefit your operation—like cold cutting and abrasive cutting, hydroblast waste water recycling and prepping your vessels and tubes for repair or inspection.

A New Level of Project Visibility and Accountability

Capping PSC's broad service offering, our Rhino™ system sets a new standard, giving you unprecedented control over the work being performed and the ability to view, track and approve real time documents on the Web. It also helps us measure costs against your purchase order, and show you what you'll be spending before you get the bill.

Safe on Purpose

At PSC, safety is more than a priority. It's a core value. From personnel to equipment, we have made significant investments to ensure safe operations at your facilities and ours. And it's all driven by our comprehensive Safe on Purpose behavioral based program.
