VACUUM SERVICES

Getting the Job Done

Liquid Vacuuming Services

Liquid vacuum trucks efficiently and cost-effectively remove and transport a wide range of liquids from surface impoundments, tanks and other vessels. PSC maintains more than 200 units for use over the road, or in plant for liquid transportation and spill clean up.

PSC's liquid vacuum trucks are equipped with pump capacities ranging from 250 to 1,200 cubic feet per minute (cfm). The waste material or product is pulled through flexible hoses, ranging from two- to four-inches in diameter, and collected in truck-mounted containers.

Large DOT-certified units, with capacities of up to 5,500 gallons, are generally used for off-site transportation of wastes. Smaller units with capacities of 3,000 gallons are typically used within plant facilities to move materials from dumps and tanks to waste treatment areas, slop oil tanks or temporary storage. Many units have full rear-opening doors to simplify clean out at the conclusion of a project.

PSC handles a range of liquids and semi-solids, including both flammable and corrosive materials. Typically, these materials

include oil skimmings, sludges, wastewater, leachate, drilling mud, spent coolants, and stock spills.

Air Moving Services

PSC offers air moving services for collecting solid industrial wastes and salvageable materials from hazardous or difficult-to-reach areas. Using controllable suction velocities of 3,500 to 6,000 cfm, air movers convey almost any substance that will fit through an eight-inch hose, for a distance of up to 1,000 feet.

Our equipment is capable of handling a wide range of materials, wet or dry, hazardous or non-hazardous, with a consistency ranging from a fine powder to large chunks of concrete. Substances we typically handle include: ash, lime, grains, oil, ore dust, drilling mud, woodchips, and construction debris.

To optimize the use of air moving equipment and reduce project time, PSC incorporates vacuum tight container bins into the process. By attaching our air moving machines directly to the bins, we avoid job interruptions normally required to empty the truck. When full, the bins can be quickly removed and replaced with another, allowing the vacuum unit to continue operating.

Get the Performance You Deserve

PSC provides industrial cleaning and environmental services coast-to-coast from our nationwide network of facilities. Comprehensive, one-stop services. Personal attention. Innovation, technology and environmental leadership. It's time to put PSC on your team.

For further information about PSC and any of its services, contact us at (877) 772-6693.

Why Choose PSC?

Supreme Safety

—first and foremost, for performance you can rely on

The Broadest Range of Applications

—to deliver the safest, most effective and economical results

Highly Trained, Experienced Professionals

—who know their equipment, your facility and who do the job right the first time

Coast-to-Coast Coverage

—thanks to a nationwide fleet of equipment for fast local response, with centralized control

Transparency and Accountability

—with our new automated technology and Rhino™ systems, which ensure best-practice procedures, better project visibility and help you manage costs
